What is claimed is:

1. A method, comprising:

generating classification outputs from a first data classifier based on first data elements,

using the classification outputs and the first data elements to generate rules relating the first data elements and the classification outputs.

- 2. The method of claim 1, wherein the first data elements include data based on usage of a telecommunications network.
- 3. The method of claim 2, wherein the data include call detail records.
- 4. The method of claim 1, wherein the first data classifier includes at least one of: a neural network, an unsupervised classifier, and a Bayesian classifier.
- The method of claim 1, wherein generating rules includes:combining the first data elements and the corresponding classification outputs.
- 6. The method of claim 1, further comprising:

 based on the generated rules, generating a second data classifier.
- 7. A system, comprising:
- a first data classifier configured to generate, based on first data elements, classification outputs, and

a rule inducer configured to use the first data elements and the classification outputs to generate rules relating the first data elements and the classification outputs.

- 8. The system of claim 7, wherein the first data elements include data based on usage of a telecommunications network.
- 9. The system of claim 8, wherein the data include call detail records.
- 10. The system of claim 7, wherein the data classifier includes at least one of: a neural network, an unsupervised classifier, and a Bayesian classifier.
- 11. The system of claim 7, further comprising:
 - a second data classifier based on the rules.
- 12. A processor program for classifying data, the processor program disposed on a processor readable medium and comprising instructions to cause a processor to:

20/565484.2 - 22 -

generate classification outputs based on first data elements provided to a first data classifier, and

generate rules relating the first data elements and the classification outputs, based on the first data elements and the classification outputs.

- 13. The processor program of claim 12, wherein the first data elements include data based on usage of a telecommunications network.
- 14. The processor program of claim 12, further comprising instructions to cause to a processor to:

generate a second data classifier based on the rules.

15. The processor program of claim 12, where the first data classifier is at least one of: a neural network, an unsupervised classifier, and a Bayesian classifier.
